

Control unit

The CONTROL-UNIT is a monitoring console which offers the possibility to connect in parallel up to six identical HV CONCEPT generators units.

The equivalent generator obtained is fully controlled by the control-unit. User has not to adjust each generator. Global current is automatically shared and balanced between the generators.

- ▶ All the functionality of the standard front panel:
 - Adjustment and Display of Voltage and Current
 - Indicators : HVon, HVoff, Fault, Voltage/Current Regulation, Line, Interlock,
 - Local and Remote modes
 - Preset & OCP/OCL functions
 - HVon, HVoff control
- ▶ RS232, GPIB or PROFIBUS interfaces.
- ▶ Length : up to 10 meters.
- ▶ Available for SR, CCR or LPR models.
- ▶ On request : Control-unit for parallel and serial configuration of the generators.
